

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

Annual Report.

To His Excellency John W. Griggs, Governor of New Jersey :

SIR—I have the honor to submit herewith the Sixth Annual Report of the State Board of Medical Examiners of New Jersey.

During the past year, seventy-five (75) candidates made application to this Board for examination for license to practice medicine and surgery in this State, in accordance with the provisions of the law. Two (2) candidates subsequently withdrew before completing the examination, and three (3) were rejected ; the remaining seventy (70) passed a satisfactory examination and received the license of the Board. The rejections were four and one-tenth per cent. The examinations were held in June and September, at the Capitol building, and extended through a period of two days, including the intervening evening, and embraced the following subjects : (1) **Materia Medica and Therapeutics**, (2) **Obstetrics and Gynecology**, (3) **Practice of Medicine**, including diseases of the skin, nose and throat, (4) **Surgery**, including surgical anatomy and diseases of the eye, ear and genito-urinary organs, (5) **Anatomy**, (6) **Physiology**, (7) **Chemistry**, (8) **Histology**, **Pathology and Bacteriology**, and (9) **Hygiene and Medical Jurisprudence**. Each section is assigned to an examiner, who submits ten questions to the Board for approval before presenting them to the candidates. The questions, which altogether number ninety, are prepared with the view of testing both the scientific and practical fitness of applicants to practice medicine and surgery. Six hundred and seventy-five points, or an average of seventy-five per cent., are required to obtain the certificate of the Board.

The low percentage of rejections which I have the honor to report this year, plainly shows the effect that State Medical Examining Boards have had in extending the period and in elevating the standard of medical study. These Boards were regarded at first as unnecessary, and even presumptuous, by the faculties in many of our medical schools, and were frequently made the objects of adverse criticism and ridicule. The question that now confronts many of the colleges is, Can their graduates pass the State Boards ? To accomplish this,

the curriculum of study has been enlarged in the vast majority of medical schools in this country.

The percentage of rejections was lower this year than at any time since the organization of the Board in 1890, which demonstrates that the recent candidates have been prepared with greater care and thoroughness for their life-work. In every instance, candidates were required to submit evidence showing four years of medical study, including three courses of medical lectures in separate years, before being admitted to the examinations. This requirement has brought about a becoming respect for our State medical examinations, and has made the certificate of the Board more highly appreciated by its licentiates. In addition to the medical requirements, a preparatory education, covering the following branches, is required as a minimum standard of admission to the examination: Orthography, arithmetic, English grammar and composition, geography, history of the United States, algebra and physics. Twenty-seven per cent. of the applicants for license took partial or complete courses of study at literary colleges, empowered to grant degrees in the arts, sciences or philosophy, preparatory to the study of medicine. The medical schools represented by the candidates for examination, and by those licensed through endorsement of their certificates, numbered twenty-five and were located in the States of New Hampshire, Vermont, Massachusetts, New York, Pennsylvania, Maryland, Virginia, North Carolina, Illinois, Colorado, and the District of Columbia, and in Canada, England, Italy, Germany and Austria.

New Jersey has an eminent right to insist upon fitness and thoroughness in medical teaching and study. In 1766, prior to the establishment of the Government of the United States, the medical profession of the Colony of New Jersey founded the first colonial medical society in America, and entitled it "The Medical Society of New Jersey." In its original organization, the tenure of medical apprentices was advanced to four years and the study of Latin and Greek was required of them. In 1772, the Society secured a legislative enactment requiring medical examinations preliminary to admission to medical practice within the Colony. This law was re-enacted after the organization of the State, and remained in force until 1854. During that time, the medical profession attained an admittedly high standard of excellence that brought honor to the State. But, in 1854, this restrictive measure was removed by an Act of Legislature, and, from that period until 1880, there were no laws regulating admission to the practice of medicine in New Jersey. As a result of this, quacks abounded in every part of the State, until, in 1880, the

demands of the public and of the profession for legal protection became so urgent that a law was enacted, enforcing the registration of medical diplomas and making it a misdemeanor to offer a fraudulent diploma for registration. This law, however, was not actively enforced, and so entirely failed in its object, that it remained for the institution of the State Board of Medical Examiners, in 1890, to give the protection sought for, and to drive medical charlatans and quacks from the State.

Our present medical law meets the requirements of the times in an eminent degree, and some of its provisions have been extensively copied throughout the country by a number of the thirty-nine States which maintain Examining Boards. It remains for the proper enforcement of the law to elevate the profession of medicine in this State to a higher position than it has yet occupied, and to establish upon a broader basis its well-earned reputation for skill. The elevation of the standard of medical education will alone free our State from medical charlatans and impostors. It is not patent medicines, nor the medical quack, that the people want, but relief from their physical ailments. Thorough and long-continued medical training will best afford this, and the license of the State should be the guarantee to the public that its possessor is well qualified, by a thorough scientific and practical medical education, to successfully conserve the public health. This is the more important since our State is situated between the two great educational centers, New York and Philadelphia, and hosts of young practitioners, graduates of numerous medical schools of all grades, are constantly knocking at our doors.

In addition to the candidates admitted to practice after taking the examination of this Board, twenty-seven have been admitted by endorsement of the certificates of examination and license, issued by the Regents of the University of the State of New York, and seventeen by endorsement of the certificates of the Medical Council of Pennsylvania.

The Medical Council of Pennsylvania accepts our certificate in lieu of further examination of candidates for practice in that State, but the Regents of the University of the State of New York do not, although our medical requirements are higher than theirs, since six hundred and seventy-five points must be obtained by a candidate to secure our license, and only five hundred and twenty-five points to secure theirs.

During the year, twenty-four midwives have been licensed to practice by this Board, after thorough examination in each case. In the majority of instances, these midwives presented diplomas from schools

8 STATE BOARD OF MEDICAL EXAMINERS.

of midwifery in New York city, or from European schools, as evidence of special study.

In Appendix A, will be found the names of the medical institutions represented by the applicants for our examination, with the official number and averages of each applicant. In Appendix B, will be found the names of the medical institutions represented by the licentiates of New York and Pennsylvania, endorsed by this Board. In Appendix C, are the names of our licentiates for this year, both examined and endorsed, with their addresses. In Appendix D, will be found the names and residences of licensed midwives of this year. In Appendix E, is contained a synopsis of the requirements governing medical practice in this State, and, in Appendix F, the rules for conducting the examinations of the Board. Appendix G contains the conditions under which midwifery licenses are issued.

Respectfully submitted,

E. L. B. GODFREY, M. D.,
Secretary.

CAMDEN, N J., December 31st, 1896.

* Endorsement of New York certificate.

† Endorsement of Pennsylvania certificate.

Errata.

The name of Dr. William Laughlin Dunning, of New York City, was inadvertently omitted from the list of licentiates in the Report for 1895, and the name, Dr. Agnes Maria Hand, of Cape May City, should have been printed Dr. Anna Maria Hand.

Licentiates are requested to notify the Board of any change in their residence.

APPENDIX E.

Requirements for License to Practice Medicine and Surgery in the State of New Jersey.

All requirements for admission should be completed at least two weeks before examinations.

They are as follows :

1. Evidence that applicant is more than twenty-one years of age.
2. Certificates of moral character from not less than two physicians in good standing, one of whom must be a resident of this State.
3. Candidates must be graduates from an accredited literary or scientific college, or have completed satisfactorily not less than a three years' course in an accredited high school or academy, or have received a preparatory education covering the following branches, viz., orthography, arithmetic, English grammar and composition, geography, history of the United States, algebra and physics, as certified by the State Superintendent of Public Instruction of New Jersey.
4. Candidates must have "received a diploma conferring the degree of doctor of medicine from some legally-incorporated medical college (which, in the opinion of said Board, was in good standing at time of issuing said diploma), in the United States, or a diploma or license conferring the full right to practice all the branches of medicine and surgery in some foreign country, and have also studied medicine four years, including three courses of lectures in some legally-incorporated American or foreign medical college or colleges prior to the granting of said diploma or foreign license ; provided, however, that two courses of medical lectures, both of which shall be either begun or completed within the same calendar year, shall not be considered to satisfy the above requirements."

First Exemption.—Evidence of one year's service "as a member of the resident medical staff of any legally-incorporated charitable or municipal hospital or asylum," or of five or more years' reputable practice of medicine and surgery, may be accepted as equivalent to one year's study of medicine and surgery.

5 "All examinations shall be written in the English language, and the questions and answers shall be, except in materia medica and therapeutics, such as can be answered in common by all schools of practice. If the applicant intends to practice homœopathy or eclecticism, the members of said Board of those schools, respectively, shall examine said applicant in the materia medica and therapeutics of the school in which such applicant intends to practice. The examinations shall be in the following subjects, namely : 1. Materia medica

and therapeutics ; 2. Obstetrics and gynecology ; 3. Practice of medicine, including diseases of the skin, nose and throat ; 4. Surgery, including surgical anatomy and diseases of the eye, ear and genito-urinary organs ; 5. Anatomy ; 6. Physiology ; 7. Chemistry ; 8. Histology, pathology, bacteriology ; 9. Hygiene, medical jurisprudence."

Second Exemption.—"Applicants examined and licensed by, or who are or have been members of State examining and licensing boards of other States, upon the payment of fifty dollars to the Treasurer of said Board, and on filing with the Secretary of said Board a copy of his or her license or certificate, certified by the affidavit of the President and Secretary of such Board, showing also that the standard of requirements of said Board at the time of said license or certificate was issued was substantially the same as that required by said Board, and of his or her affidavit as to the personality thereof, may be granted a license by said Board without further examination thereby."

APPENDIX F.

Rules for Conducting Medical Examinations.

First—Help of every kind must be removed from the reach and sight of the candidate. Any candidate detected in trying to give or obtain aid shall be instantly dismissed from the room, and his or her paper for the entire work canceled.

Second—Questions must be given out and answers collected punctually at the time specified for that section. Under no circumstances will papers be accepted unless the examination be actually held at the appointed time. The time for each examination paper of ten questions shall not exceed two hours.

Third—If any candidate withdraw himself or herself, without permission, from the sight of the examiner, his or her examination shall be closed. This rule permits a candidate, temporarily ill, to withdraw from the room and return only by the consent of the examiner.

Fourth—No candidate shall, under any circumstances, enter the examination more than thirty minutes late, unless excused by the examiner, and no candidate shall leave the room within thirty minutes after the distribution of question papers.

Fifth—All examinations shall be in writing. Candidates must furnish their own penholders and pens. Paper, blotters and ink will be supplied by the Secretary.

Sixth—The examinations shall continue two days, the sessions of the first day being from nine to eleven, eleven to one, three to four, four to six and eight to ten, respectively ; the sessions of the second day being from nine to eleven, eleven to one, two to four and four to six, respectively. The final meeting of the Board for the adjudication of the examinations shall be held within two weeks thereafter.

Seventh—The examiner in each section shall not be engaged in any other business except supervising the examination while it is going on, and there shall be one or more associate examiners present with him during the entire session.

Eighth—A total average of seventy-five per cent. shall be necessary to license a candidate (he or she having otherwise complied with the law), providing that in no section shall the average percentage be less than fifty per cent., in which case, however, should the total average percentage in all other sections be above seventy-five per cent, the candidate may be granted a second examination immediately upon that section. A candidate having less than fifty per cent. in more than one section shall be rejected.

Ninth—Each candidate shall sign the following pledge before commencing the examinations, viz. : “ I hereby pledge my word of honor, without mental reservation or evasion in any manner, that during my examinations before this Board which I am now about to commence, I will neither give to a fellow-candidate nor receive from him, or from any other source whatever, any information relating to the subject under consideration ; furthermore, I will write the number (given hereon opposite my name) upon all my examination papers as my official number.”

APPENDIX G.

Conditions Under Which Midwifery Licenses Are Issued.

By order of this Board, Midwifery License No. is herewith issued to you under the following conditions, and the neglect or violation of any one of them will be sufficient cause for the revocation of this license :

First Condition—That you shall file this license, or a true copy thereof, in the office of the clerk of the county wherein you live.

Second Condition—That you shall report to the proper health officers every case of child-birth attended by you within thirty days thereafter.

Third Condition—That you shall, previous to and immediately after every examination or contact with a case of pregnancy, thoroughly wash and cleanse the hands, particularly the finger-nails, with soap and hot water, and that you shall always keep both the mother and infant perfectly clean and free from all contaminating discharges, and that you shall always be temperate and sober while attending women in child-birth.

Fourth Condition—That you shall secure the attendance of a reputable physician at once in every case where anyone of the following conditions exists in the lying-in-woman, viz.: 1. Premature birth or miscarriage. 2. Convulsions. 3. Placenta prævia, or hemorrhage before delivery. 4. Prolapse of the cord. 5. Presentation of either the breech, face, hand, shoulder, foot or knee, or the "crossed" or transverse presentation. 6. Post-partum hemorrhage or hemorrhage after delivery. 7. Retained placenta ("afterbirth") or any portion thereof. 8. Fever, inflammation or soreness of the nipples or breasts, "milk" leg, or any other abnormal condition.

Fifth Condition—That you shall secure the attendance of a reputable physician at once whenever the new-born infant is asphyxiated, blue or does not breathe, or has any convulsions, deformity or malformation, retention of urine or feces, bleeding, redness or inflammation of the navel, or any swelling, redness or inflammation of, or discharge from, the eyelids or eyes, or any other abnormal condition.

Sixth Condition—That you shall always secure the immediate services of a reputable physician whenever any abnormal, irregular or unhealthy signs or symptoms appear in either the mother or infant.

Seventh Condition—That you shall not prescribe, advise or give any drug or medicine or other agency excepting possibly some preparation of ergot which, however, must never be given before the birth of the head of the infant, or a cathartic on the second or third day after delivery—to a lying-in-woman or to the infant, or to any other person or persons, under penalty of not only losing this license, but also of prosecution under this Midwifery law, as well as under the medical law of 1890.
